In April 2010, Rainforest Alliance’s SmartWood Program suspended APRIL’s interim FSC Controlled Wood certificate for their PT. Riau Andalan Pulp and Paper Forestry Division (Riaufiber) operations which covered approximately 350,000 hectares out of more than 1.8 million hectares APRIL has under its management. The decision was based on RA/SW audits in 2009 that found non-conformance of APRIL operations with FSC Controlled Wood requirements, as well as Rainforest Alliance’s conditions agreed by APRIL in August 2008 to not clear any natural forests for which no professional HCVF assessments had been done or for which the APRIL’s HCVF delineation was disputed by stakeholders.

WWF-Indonesia, together with local NGO networks Jikalahari and Walhi-Riau, have been monitoring APRIL’s forestry operations closely since 2005 through their Eyes on the Forest project (www.eyesontheforest.or.id). In July and November 2010, the Eyes on the Forest project published two investigative reports detailing how APRIL violated its agreement with Rainforest Alliance, commitments to WWF, and its own public commitment to protect High Conservation Value Forests throughout their corporate operations in 2009 and 2010.

The Eyes on the Forest reports also confirmed that Rainforest Alliance’s request to APRIL to “within 10 days [...] stop all conversion of natural forest, including secondary or degraded forest in peat forest area” was not met. In its letter dated 6 April 2010, Rainforest Alliance set a further 90 day deadline for APRIL to take corrective action. WWF is unaware of any significant corrective action taken before or after this extended deadline. Given these facts, WWF concludes that APRIL has no serious intention to protect its High Conservation Value Forests or to regain FSC CW certification.

This is sad news for Sumatra’s forests. WWF worked for years to encourage and support APRIL to become a leader in the pulp & paper industry and adopt best management practices that would bring the company on a road towards sustainable development. However, the company has failed to make fundamental changes to its practices.

SmartWood’s audits and Eyes on the Forest investigations confirmed that APRIL continues to source wood from clearing of natural forests and draining of peat soils without appropriate HCV assessments and cleared HCVF identified by WWF and also by themselves. The company thus is continuing to destroy High Conservation Value Forests and high carbon value areas important for conservation and climate change mitigation.

This means that corporate information on environmental commitments released by APRIL over the years and still displayed on the company’s website lack credibility. Any statements made by the company in regard to its environmental sustainability must be viewed with high skepticism and should not be taken at face value.

APRIL’s strong insistence on continuing its natural forest clearance practices goes directly against the recent commitments by the Indonesian Government. President Susilo Bambang Yudhoyono committed to reduce the country’s carbon emissions by 26% or 41% compared to the Business as Usual level. Recent provisional analysis commissioned by the National Development Planning
Agency (BAPPENAS) concluded that the utilization of peat land probably contributes less than 1 percent of GDP yet accounts for almost 50 percent of emissions\textsuperscript{1}. APRIL could have decided to support the President of Indonesia's pledge to reduce emissions by stopping its conversion of natural forest and peat areas. The Minister of Forestry committed to no longer allow any natural forest conversion on peat soils as of 11 May 2010, such as on the Kampar and Kerumutan peninsulas where APRIL still continues to clear natural forest and drain deep peat\textsuperscript{2,3}.

WWF calls on APRIL to stop supplying or purchasing wood from conversion of HCVF and high carbon stock areas and not clear and drain peat land forests and peat soils across the Group's global operations, to stop causing further destruction of biodiversity including tiger and elephant habitat and emission of vast amounts of greenhouse gases.

WWF calls on APRIL to immediately remove any statement implying ongoing conservation collaboration with WWF on its website and in any other publications.

WWF-Indonesia will continue to work with Indonesian pulp & paper producers willing to introduce better practices to lead the industry. However, APRIL has missed the opportunity to cater to the strong and growing demands for environmentally responsible products and instead opted for continuing the clearing of high value tropical forests.

Until APRIL changes course and to demonstrate its responsibility and sustainability in the field, WWF recommends that existing or potential buyers and investors should be wary of conducting any business with APRIL if they want to avoid the risk of contributing to natural forest destruction.

5 Eyes on the Forest (November 2010) EoF calls on SMG/APP and APRIL to keep their promises: Stop conversion of natural forest and drainage of peat and produce pulp, stop violation of the country’s climate commitments.
APRIL Fact Sheet (November 2007) Protecting High Conservation Value Forests (HCVF) (http://www.aprilasia.com/images/stories/hcvf.pdf) writes: “From 2005, APRIL has publicly adopted a High Conservation Value Forests (HCVF) commitment through its Environmental, Social, Health and Safety (ESH) Policy and Code of Best Practice (CoBP). [...] APRIL conducts HCV assessment using the Indonesian HCVF Toolkit, developed by Rainforest Alliance and ProForest in 2003, and based on the 1999 Forest Stewardship Council (FSC) concept. The HCV assessments are then peer-reviewed by internationally recognized institutions such as ProForest UK and WWF Indonesia which also conduct their separate HCV assessment within the concessions of APRIL or its partners.”

RA/SW requested “APRIL must, within 10 days from the date of this letter including secondary or degraded forest in peat forest areas, and demonstrate to RA/SW auditors that this commitment is being met, based on field observations and interactions with other stakeholders” to re-initiate Controlled Wood and HCVF auditing activities. The deadline was 16 April. For further information, please contact Richard Z. Donovan, Vice President of Forestry At: rdonovan@ra.org.

RA/SW requested “APRIL demonstrates that is has met the 10 Major CARs included in our most recent auditing report and within 90 days from the date of this letter” to re-initiate Controlled Wood and HCVF auditing activities. The deadline was 4 July. For further information, please contact Richard Z. Donovan, Vice President of Forestry At: rdonovan@ra.org.
